

`math.Quaternion.inverse`

`math.Quaternion.normalize`

`math.Quaternion.norm`

```
graph LR; A[math.Quaternion.inverse] --> C[math.Quaternion.norm]; B[math.Quaternion.normalize] --> C;
```

The diagram illustrates that both the `math.Quaternion.inverse` and `math.Quaternion.normalize` methods depend on the `math.Quaternion.norm` property. The source methods are shown in white boxes on the left, and the target property is shown in a gray box on the right. Blue arrows point from each source box to the target box.
